

BENJAMIN W. KAMAU

Data Engineer | Workflow Automation | Document Intelligence

+254 701 948 296 | benjaminkamau@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

BSc Information Technology graduate with over two years of experience in workflow automation, regex-based data transformation, system testing, troubleshooting, and technical support. Supported seven operational workflows at Patika Technology and currently builds data and platform projects spanning document intelligence, ETL pipelines, multi-tenant applications, and marketing analytics. Strong in Python, SQL, Git, data validation, technical documentation, and translating business processes into reliable systems.

CORE SKILLS

Data Engineering & Automation: Python, SQL, Pandas, ETL pipelines, data transformation, data validation, data quality, regex mapping, workflow automation

Platforms & Tools: Git, GitHub, Streamlit, Supabase, PostgreSQL, React, TypeScript, Vite, Tailwind CSS, Linux, shell scripting, WordPress

Foundational Exposure: Apache Airflow and Apache Kafka through IBM/Coursera coursework and guided projects

PROFESSIONAL EXPERIENCE

Patika Technology Limited (Sanifu AI) - Technical Support & Workflow Specialist

Nov 2023 - Jan 2026 | Nairobi, Kenya

- Supported and maintained 7 operational workflows used for business data processing and client delivery.
- Created and refined regex-based mapping and transformation rules to clean, standardize, and contextualize incoming data.
- Executed unit and integration testing across workflow pipelines, investigated output errors, and documented fixes.
- Provided user and production support, troubleshooting workflow failures while minimizing disruption to operations.
- Contributed to AI-assisted workflow development, quality review, and continuous process improvement.

CFAO Motors Kenya - Information Technology Intern

Feb 2023 - Aug 2023 | Nairobi, Kenya

- Set up and deployed laptops, desktops, and related computer hardware for staff use.
- Installed and configured Windows operating systems and standard business software on company devices.
- Troubleshot computer hardware, software, login, and connectivity issues and supported users through the internal ticketing process.
- Assisted with the rollout and user setup of Okta authentication across CFAO systems.
- Supported network administration, hardware maintenance, technical documentation, and day-to-day enterprise IT operations.

SELECTED PROJECTS

Intelligent Document Processing Platform - Active Development

- Building a modular Python platform that ingests PDF, CSV, XLSX, email, and text documents, then normalizes, classifies, parses, validates, and routes them through configurable workflows.
- Implemented structural parsing contracts, validation foundations, a workflow DSL/DAG runner, reusable operations, telemetry patterns, tests, and a Streamlit operator-console direction.

Technologies: Python, Streamlit, workflow orchestration, document parsing, validation, Git

ExploreAfrica Travel Platform - Active Development

- Developing a multi-tenant travel platform with a React and TypeScript frontend and a Supabase/PostgreSQL foundation.
- Designed tenant, identity, roles, permissions, row-level security, audit tables, provisioning flows, architecture decision records, and implementation roadmaps.

Technologies: React, TypeScript, Vite, Tailwind CSS, Supabase, PostgreSQL, GitHub

Competitor Price Intelligence Platform

- Developed an ETL-oriented solution for collecting, transforming, comparing, and reporting competitor pricing data to support market and pricing decisions.

Technologies: Python, SQL, ETL concepts, data transformation, workflow automation

ETL Banking Pipeline

- Built an end-to-end Python ETL pipeline covering extraction, transformation, validation, logging, and loading of banking data.

Repository: github.com/kamaubenjamin/ETL-banking-pipeline

Pair & Place Website Operations and Analytics - Client Maintenance

- Improved WordPress reliability through backup validation, SMTP testing, booking-form checks, notification routing, timezone correction, and maintenance documentation.
- Assessed website and campaign tracking needs for GA4, social referrals, form submissions, and marketing attribution.

Technologies: WordPress, Elementor, WP Mail SMTP, Google Analytics concepts, website QA

PhoneHub - Earlier Personal Project

- Built an Android application during university using Java, demonstrating earlier exposure to mobile application development and software engineering fundamentals.

Note: Included as historical project experience; Android development is not a current specialization.

SELECTED CERTIFICATIONS

- micro1 - Technical Support & Workflow Specialist
- IBM - ETL and Data Pipelines with Shell, Airflow and Kafka
- IBM - Python Project for Data Engineering
- IBM - Introduction to Data Engineering
- IBM - Relational Database Administration (DBA)
- IBM - Introduction to Relational Databases (RDBMS)
- IBM - Hands-on Introduction to Linux Commands and Shell Scripting
- IBM/Coursera - Python for Data Science, AI & Development

EDUCATION

Mount Kenya University - Bachelor of Science in Information Technology

May 2020 - Aug 2023 | Upper Second Class Honours
